
ASPHALT PAVING HISTORY

(General Rewrite)

GENERAL

This Instructional Memorandum describes the data collection phase of Pavement Management, which provides information for performance evaluations, material utilization, and construction features of asphalt paving projects. The Asphalt Paving History (Form #937) is used for data collection and reporting.

REPORT FORM

Form #937, copy attached, is to be filled out for each pavement course constructed.

REPORTING

Pavement Histories will be required on all pavement work, with tonnage (Mg) greater than 5,000.

Each project may include several types of construction, e.g., base, binder, surface, shoulders, sub-base and resurfacing.

DATA REQUIRED

The report form has space allowed for a number of data entries; include all data that is readily available. Include milepost limits on the location description line.

PREPARATION AND DISTRIBUTION OF REPORTS

The District Materials Engineer will be responsible for initiating the report and for maintaining at least one file at the District Materials Office. Additional files at the District level may be maintained as required by District Staff. Forward one copy to Central Materials Office for the statewide files to be maintained in the Office of Materials at the Central Office. Additionally, one copy of the report should be forwarded to the appropriate Resident Maintenance Engineer or County Engineer.
